DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Smith et.al. (6,892,729).

Smith in a nasal mask discloses having a body (501) and an air inlet elbow (502), having a first end attached to said body to rotate about an axis substantially perpendicular to said body and a second end extending at an angle to said axis adapted to be attached to a source of gas, a lock mounted on said body (Fig. 16) locked on said for movement for between a locked position and an unlocked position, and wherein said

lock is in said locked position said elbow is engaged by said lock in a predetermined position to prevent rotation of said elbow about said axis and wherein said elbow is free to rotate about said axis when said lock is in said unlocked position (Col. 7, lines 50-67 and Col. 8, lines 1-20).

With respect to claim 2, Smith discloses wherein said nasal mask is attached to a patient and said elbow is in said locked position, said elbow is directed towards the top of the patient's head (Figs. 2, 12-19).

With respect to claim 3, Smith discloses wherein said second end extends substantially 90° to said axis, and wherein said lock engages a notch on said elbow adjacent said second end when in said locked position (Figs. 14, 16).

With respect to claim 4, Smith discloses a mask body defining a chamber adapted to enclose a patient's nose and an air inlet elbow having a first end attached to said body to rotate about an axis substantially perpendicular to said body, a second end extending at an angle to said axis adapted to be attached to a source of gas and a passage connected between said first end and said chamber, a lock mounted on said body for movement between a locked position and an unlocked position, and wherein when said lock is in said locked position said elbow is engaged by said lock to lock said elbow in a predetermined position relative to said body to prevent rotation of said elbow about said axis and wherein said elbow is free to rotate relative to said body about said axis when said lock is in said unlocked position (Figs. 14, 16; Col. 7, lines 50-67 and Col. 8, lines 1-20).

Response to Arguments

Applicant's arguments with respect to claims 1-4 have been considered but are moot in view of the new ground(s) of rejection.
